Even though the first two years of study at the SSST Medical School predominantly cover pre-clinical courses, students attend classes in at least two courses from the very first year of study which, at the same time, requires students' attendance and practice in medical institutions. If we add to that an obligatory summer practice in medical institutions (hospitals, emergency centres, health centres), which starts from the first year of study and lasts for four to six weeks, then it is clear that the Medical School at the University SSST introduces a programme that teaches students to work in practice from the very first year of study. Therefore, this study programme is unique in the Balkans, and it is our goal to educate the doctors of tomorrow.

In cooperation with the University of Buckingham during the last ten years the University SSST has founded seven departments: Computer Science, Information Systems, Engineering Sciences, Economics, Political Science and International Relations, Foreign Languages (English and German) and Sarajevo Film Academy. Our experience, along with a strong pool of experts in the field of natural, technical and social sciences as well as arts, have created the right atmosphere for the establishment of a Medical School with teaching conducted entirely in English.

Medical School program is taught entirely in English, and the content and scope of the study programme is harmonised with that of the leading medical schools in the European Union, Great Britain, USA and Canada.

The first generation of students have started program on 1 October 2014. Our students come from all over the world. We are proud that students from USA, Canada, Qatar, Croatia, Sweden, Germany, and Bosnia have chosen Sarajevo School of Medicine.
Why study at Sarajevo Medical School?

Our goal is to develop educators, clinicians, and scientists who will be the next generation of outstanding professionals in the field of health care.

We provide:

- Program designed according to the world standards
- State-of-the-art equipment and resources, modern laboratories and facilities
- Program that incorporates pre-clinical and clinical practice
- Continuous monitoring of students’ progress and personalisation help and consultation sessions
- Additional English language classes
- Latest editions of textbooks and laboratory manuals free of charge
- Programme designed to prepare students to pass exams necessary to obtain a licence to practice medicine in Western world countries

Sarajevo School of Medicine combines its state-of-the-art facilities and experienced and dedicated faculty to provide excellent opportunities for undergraduate studies. Students attending Sarajevo Medical School will receive educational experience and develop abilities, skills and professional values that will, together with acquired knowledge, make them leaders in the field of health care and give them an opportunity to practice medicine anywhere in the world.

In the past one hundred years, the greatest advances within the sciences were made in the field of medicine. Enormous medical advancements and achievements have been made through the application of core sciences such as physics, chemistry and biology. The interaction of medicine, the natural sciences, and information technology made possible the establishment of diagnoses for the most complex of conditions, as well as non-invasive surgery on diseased organs. Therefore, the first two years of medical studies at SSST will be devoted to these core disciplines, so as to forge a sound basis on which students will build specialisation skills and knowledge in clinical disciplines necessary for successful careers as doctors of medicine.

A team of professors mainly originating from Bosnia, who have worked in some of the leading clinics and universities in the United States and Canada, and who are members of the Bosnian-Herzegovinian American Academy of Arts and Sciences (BHAAS), will be available to students of the SSST Medical School via classes, seminars, on-line discussions and presentations, with an aim to, within their clinical courses, provide students with insight into the latest developments in the medical practice in the West. Through their participation in the design of the curriculum of the Medical School, the SSST will strive to ensure that the students of the SSST Medical School have an opportunity to acquire theoretical and practical knowledge to the same extent as their colleagues who attend British and American medical programmes. We are convinced that this creates an opportunity for graduates of the SSST Medical School, and thus future doctors, to work in the West, but also gives them the possibility of creating a pool of medical experts in Bosnia and Herzegovina which will initiate foreign investments in order to further develop the medical institutions in Bosnia and Herzegovina (new clinics, institutes, rehabilitation centres).

The University SSST will provide 50 scholarships (full and partial) for students of all of its departments, which are awarded based on the following criteria: applicants’ secondary school grades, entrance examination results they achieve and their financial status.
